

IMAGE FORENSICS REPORT

File: tmpkxbzdt94.jfif

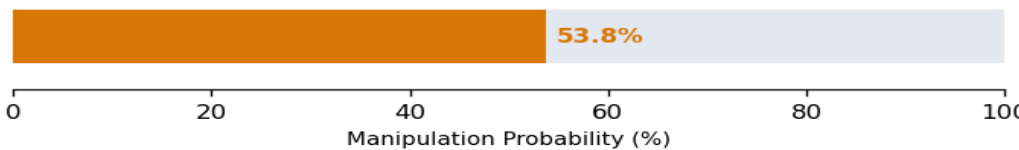

Analysis Date: June 18, 2026 | Image Size: 192x128px | Format: JPEG

Executive Summary

■ **VERDICT: POSSIBLY MANIPULATED (Confidence: 53.8%)**

Detected Manipulation Type(s): Copy-Move Forgery, AI Generation

Forensic analysis reveals MODERATE indicators (53.8%) of possible image manipulation. Key findings: Metadata Analysis (55%): EXIF data is absent or stripped — common after editing; Error Level Analysis (47%): No anomalies detected; Copy-Move Detection (100%): No anomalies detected.

Module Analysis Results

Module	Score	Risk Level	Key Finding
Metadata Analysis	55.0%	MEDIUM	EXIF data is absent or stripped — common after editing
Error Level Analysis	46.8%	MEDIUM	No anomalies detected
Noise Inconsistency	33.3%	LOW	No anomalies detected
Copy-Move Detection	100.0%	HIGH	No anomalies detected
Frequency Analysis	29.3%	LOW	Unusually high-frequency energy (27.29%) — possible AI gener

Detailed Findings

■ Metadata Analysis

- EXIF data is absent or stripped — common after editing
- Camera Make/Model absent — may indicate synthetic or edited origin

■ Frequency Analysis

- Unusually high-frequency energy (27.29%) — possible AI generation or aggressive sharpening

Visual Analysis

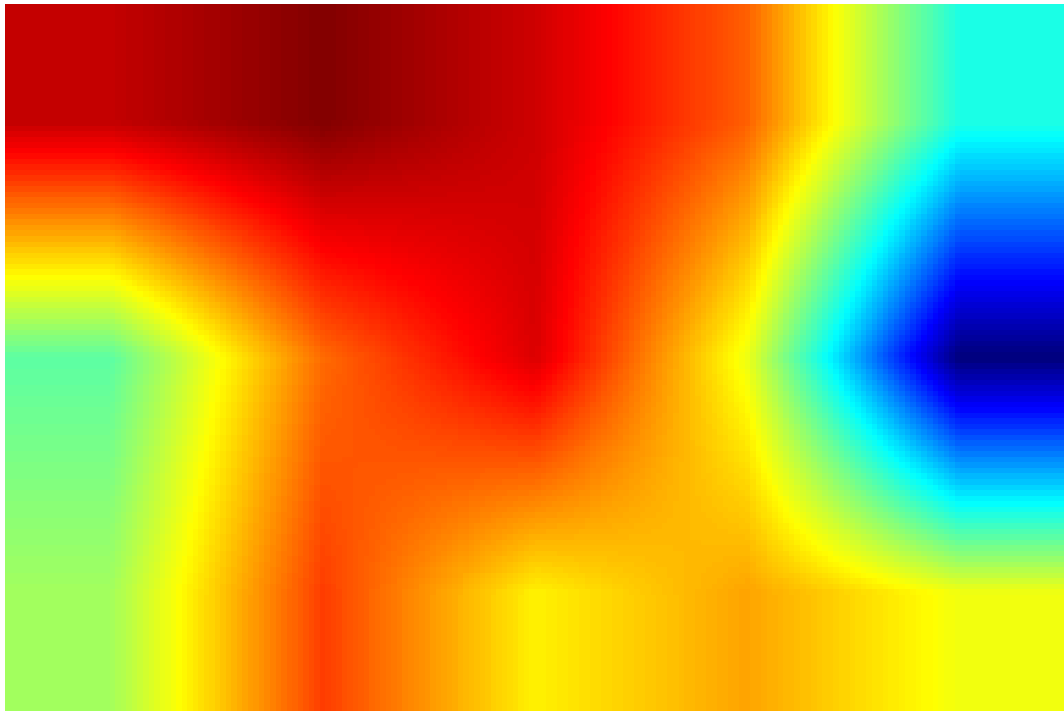

Original (Annotated)

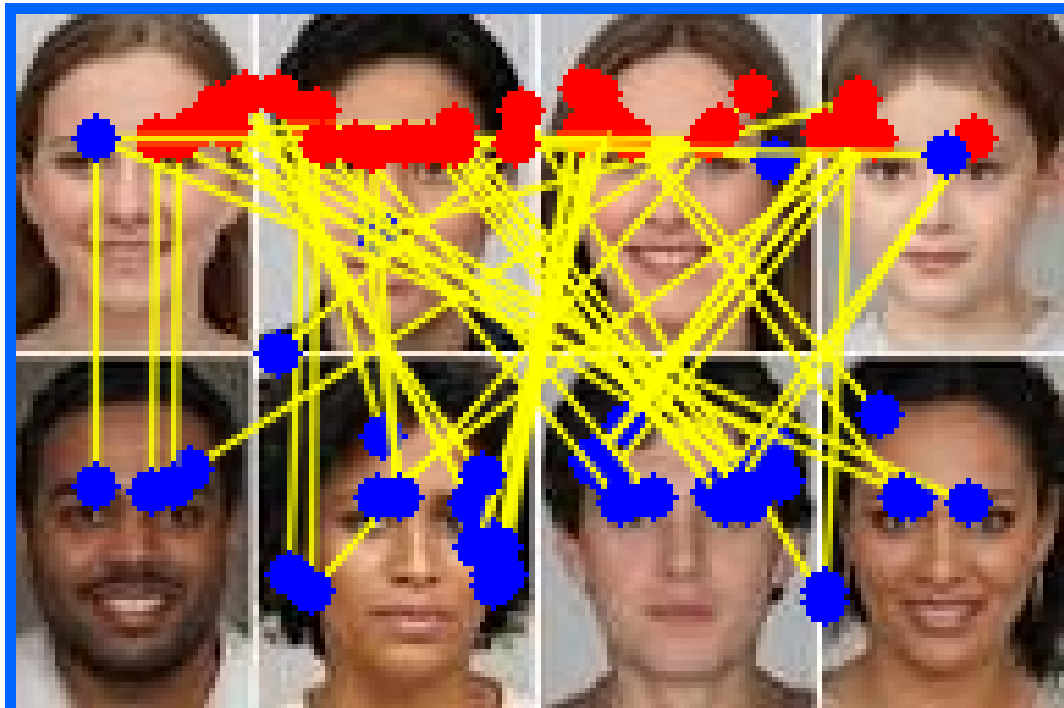

ELA — Error Level Map

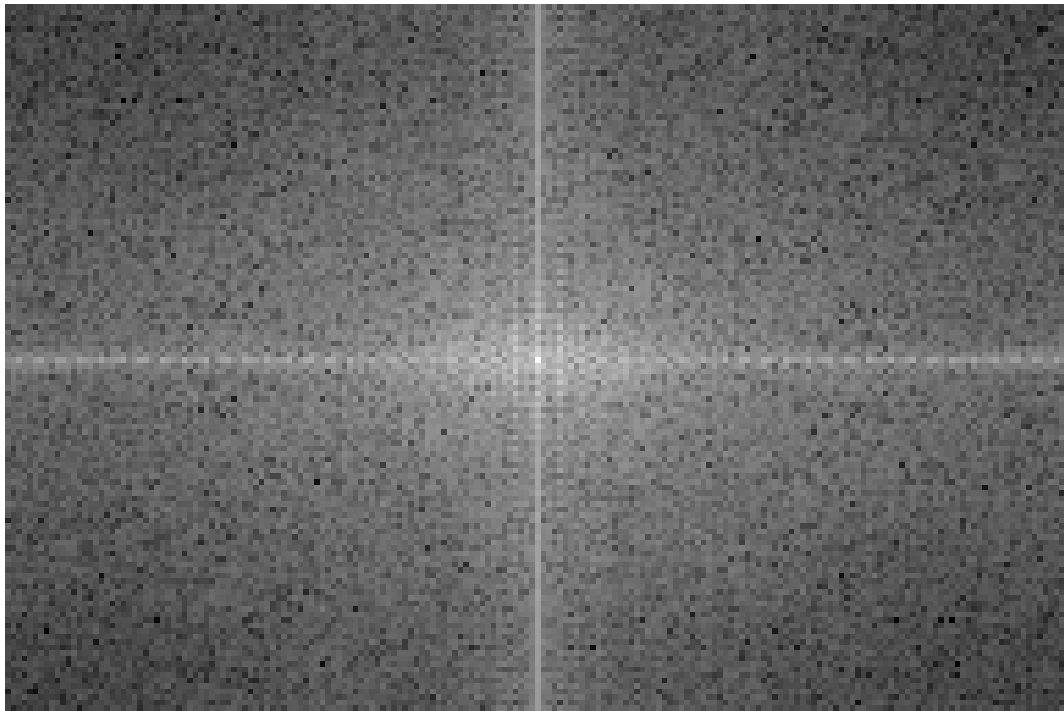

Noise — Inconsistency Heatmap

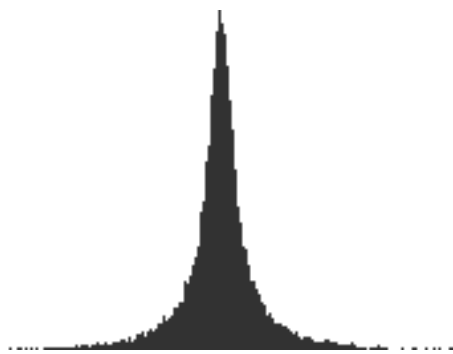

Copy-Move — Match Visualization

FFT — Frequency Spectrum

DCT — Coefficient Histogram

Metadata Inventory

No EXIF metadata found in image.
